### Notes

1. These are voluntary standards of performance for schemes where a developer/landowner has requested a connection to Northern Powergrids distribution network and where Northern Powergrid requires the developer/landowner to enter into a legal document to provide security for any apparatus to be placed within the developers/landowners own land.

2. The process excludes any time taken to obtain legal consents for any apparatus to be placed outside of the development site in land owned by a third party.

3. The process includes apparatus installed within the development site by an ICP that will subsequently be adopted by Northern Powergrid.

4. Northern Powergrid can only be responsible for the time periods where any part of the process is within their control.

5. These timescales are reliant on the developer/landowner having full title to the land and for the developers/landowners solicitor to respond to Northern Powergrids solicitor in a timely manner.
